

What's New in the Release of Antidote 12 v3

Improved Reformulation

Reformulation mode is better at eliminating repetitions and rewriting passages. A new setting prevents the reformulation of segments in italics and quotes.

WITH SUBSCRIPTION

More Precise Corrections

Enjoy improved corrections, including alerts on potentially unfamiliar time zone abbreviations. Live Correction better recognizes that a period will be typed to end a sentence currently being written. Multi-Document Correction now includes reformulation on demand.

Richer Dictionaries

Discover over 2350 new words and expressions (e.g. *memeify*, *angel's share* and *solarpunk*) and 53 new etymological notes for words and enigmatic expressions.

Improved Integrations

Use Antidote more efficiently with your software thanks to connectors that are more stable for browsers, faster for Microsoft 365 and more convenient for LibreOffice.

Dark Mode on Windows

Reduce eye strain with dark mode. When you enable this mode, the background of Antidote's windows turns from white to nearly black and contrast colours adjust accordingly.

Enhanced Security

Enable multi-factor authentication to increase the security of your connection to Antidote.

ARM64 Optimization

Run Antidote 12 on your Windows 11 computer with an ARM64 processor thanks to a new executable file dedicated to this architecture. It is nearly 50% faster, and the computer's memory and battery are used more efficiently.

Safe Exam Browser Compatibility

Grant access to Antidote Web in Safe Exam Browser's protected environment. By combining this secure browser with Antidote Web's exam mode, school administrators have even better control over exam conditions.
